How to do the 360 Room Check

Respondus Monitor and other proctoring solutions require that you video your room before you may proceed to taking your test. Here is an example of the correct way to do the video.

Make sure that you pan the room slowly. You must do 2 views around the room. Once to show your desk and the floor. And again to show your desk and walls to the ceiling.

If you are using an external computer, make sure both pans include your computer monitors.
